Using electrodes on seats is not new in the prior art. The passenger detector taught by **Serban et al** [U.S. 6,737,953] uses an electrode deposited on a woven fabric. However, there is no prior art that teaches a first and second conductor disposed transversely to define a first junction, with a first and second conductance produced in the absence and presence of applied weight.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Okada et al [U.S. 5,895,900] includes an insulating film on one surface thereof.

Schoos et al [U.S. 6,348,663] determines several parameters of a seated person by subdividing the seat.
